REFORM SEQUENCING TRACKER

[Beta]

an ambitious endeavor to codify the sequence and performance of government reforms after periods of conflict, natural disaster or political transition.

To date, nearly 15,000 reform actions have been coded for over 20 countries: Rwanda, Afghanistan, Haiti, Serbia, Montenegro, Vietnam, Zimbabwe, Kosovo, Sri Lanka, Nicaragua, Mali, Kenya, Uzbekistan, Albania, Cambodia, Lesotho, Saudi Arabia, Tajikistan, Senegal, Moldova, Liberia, and Sudan.

ISE

State at a critical juncture must face a series of difficult decisions where everything is a priority. While extensive research exists on what reforms are needed – reconstruction, anti-corruption, reconciliation, etc. -- very little explores what sequence has proven successful.

Objectives & Methods
The Reform Sequencing Tracker aims to understand how governments sequence and prioritize reforms during periods of transition.

To do this, the Tracker collects information from government strategic plans and visions onto a single database, codifying additional information such as reform mechanism, responsible ministry, reform priority, etc.
REFORM SEQUENCING TRACKER
Being developed as both research and an operational tool for practitioners

REFORM SEQUENCING TRACKER

Being developed as both research and an operational tool for practitioners

Outputs

1. **A searchable and multi-dimensional database** of over 5,000 reform actions to provide a starting point for governments tackling similar priority areas

2. **Visual analytics** to research and understand the sequence of reforms over time and across different areas of government

3. **Operational tool** for governments to track the delivery of their reforms, manage the various efforts of the public sector, and provide accountability to the public.

ISE DATA & DIGITAL

Established in the fall of 2018, the Data & Digital Team was created to provide new perspectives on historically persistent issues, while developing innovative tools to address the next generation of challenges citizens and governments face.

The aims of the Data & Digital team are deeply rooted in ISE's broader vision of addressing systems and creating more effective channels between state and citizen.
